

1 External Dependencies

ID	Description
1	The application both host and console running on windows, Which is supplied from external source
2	The number of open ports and applications running on each machine other than the application.
3	Privileges of the users of the system
4	Files and permission each user can modify
5	Size of the file each user can have
6	Network infrastructure
7	Network equipment and software running on them
8	Protocol used for remote command execution
9	Encryption of data transferred over the network
10	Software libraries used for the development of the application
11	Operating system vulnerability
12	Public Key Infrastructure (PKI) & Certificate Authorities
13	Key Management & Cryptographic Services Users other keys management ,
14	Traffic Management Possibility of DDOS

2 Entry Point

ID	Name	Description	Trust Level
1	Admin console	Console should only be accessible by the	(1)Anonymous user (2)Admins

		admin manager or stake holders	
2	Host software	There should be no way for any other person than the authorized person to install or modify the software	(1)anonymous user (2)users of the system (3)admins
3	HTTPS ports	Ports are visible to the whole network , but it shouldn't be accessible or the communication in the network should be accessible or interpretable	(1)anonymous user (2)users of the system (3)Admi

3 Exit Points

4 ASSETS

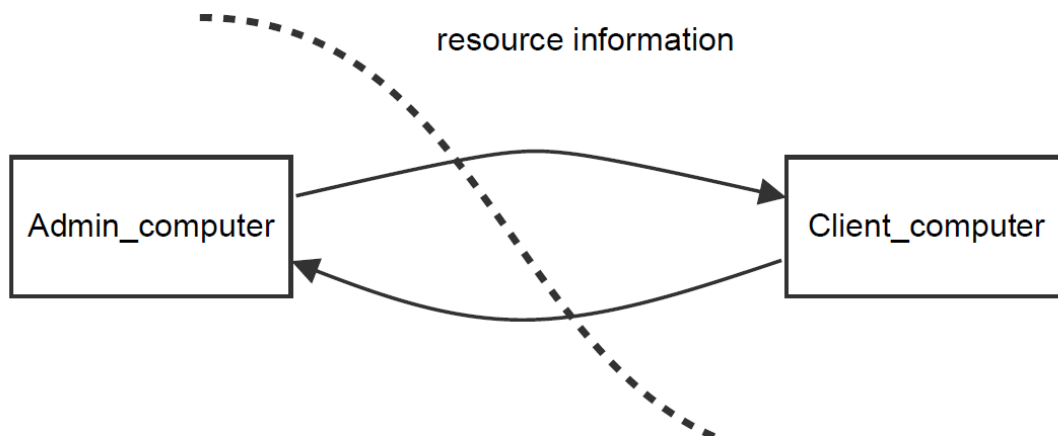

ID	Name	Description	Trust Level
1	Admins	Asset related to users	
1.1	User login	Admin login details ,time	3) admin User with Valid Login Credentials
1.2	File and data	File and data related information/information inside the file ,history of checking	3) admin User with Valid Login Credentials
2	Access to all client machines and files	The service of checking file integrity should be available to each and every machine in the client installation	3) admin User with Valid Login Credentials

5 TRUST LEVEL

1	Anonymous user	Don't have any valid access to the system
2	Users of the client system	Have valid access to the system where the file checking software is running
3	Admin	Have access to all files and system on the given network where the software is operating
